Pearson Edexcel Level Friday 26 May 2023	I / Lev	/ei 2 0	JCSE (9-1)
Afternoon (Time: 1 hour 20 minutes)	Paper reference	1	PSO,	/02
Paper 2				
You must have:				Total Marks

Instructions

- Use **black** ink or ball-point pen except for graphs where you should use a pencil.
- Fill in the boxes at the top of this page with your name, centre number and candidate number.
- There are six sections in this question paper.
- Section A answer **all** questions in Section A.
- Sections B to F select two sections from B to F. Answer ALL questions in these sections.
- Answer the questions in the spaces provided there may be more space than you need.
- You must show all your working out, with your answers clearly identified at the end of your solution.

Information

- The total mark for this paper is 79.
- The marks for **each** question are shown in brackets
 - use this as a guide as to how much time to spend on each question.
- In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- Calculators may be used.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

INSTRUCTIONS

	Topic studied	Page
Section A – answer all questions in this section	Research methods – How do you carry out psychological research?	3
	Topic studied	Page
Sections B to F – select two sections from B to F.	Section B: Criminal psychology – Why do people become criminals?	17
Answer ALL questions in these sections.	Section C: The self – What makes you who you are?	23
	Section D: Perception – How do you interpret the world around you?	29

around you?	29
Section E: Sleep and dreaming – Why do you need to sleep and dream?	36
Section F: Language, thought and communication – How do you communicate with others?	42

SECTION A

Research methods – How do you carry out psychological research?

Answer ALL questions in this section. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ⊠. If you change your mind about an answer, put a line through the box ⊠ and then mark your new answer with a cross ⊠.

1 Gary conducted an experiment to test whether there was a difference in the ability of boys and girls to conserve number. He sampled 50 boys and 50 girls aged six years old.

Gary showed them the image in **Figure 1**.

Gary asked each child to say whether the top row of buttons contained more, less, or the same number of buttons as the bottom row.

1

2

- (a) Identify the independent variable in Gary's experiment.
 - 🖾 🗛 age
 - **B** gender
 - C ability
 - **D** conservation

(b) Give **two** ways that Gary could ensure his experiment is ethical.

(2)

(1)

NOT WRITE IN THIS AREA 00

3

DO NOT WRITE IN THIS AREA

The results of Gary's experiment are shown in **Table 1**.

	Number of children who said the top row contained less buttons than the bottom row	Number of children who said the top row contained the same number of buttons as the bottom row	Number of children who said the top row contained more buttons than the bottom row
Boys	5	13	32
Girls	1	25	24

Table 1

(c) Calculate the percentage of girls who said that the top row contained the **same** number of buttons as the bottom row, out of all the children in the experiment.

(2)

Percentage

(d) Calculate the range for the number of children who said the top row contained **more** buttons than the bottom row.

(1)

Range

ne ratio for the number of children who said that the top row more buttons than the bottom row, to all children taking part in nent.	(2)
Ratio conclusion that Gary could make about the ability to conserve tween boys and girls from the results in Table 1 .	(2)

2 Kamira is investigating morality. She wants to find out how likely people are to return lost items. Kamira conducted an observation for her investigation.

Kamira went to a large shopping centre and positioned herself in the food court where people often sit to eat and have been known to leave personal items behind when leaving.

When someone had left an item behind, Kamira observed the behaviour of all passers-by who saw the item. She recorded whether they:

- looked at the item, but then ignored it
- picked up the item and gave it to a member of staff
- walked away with the item.
- (a) Describe why Kamira may have used an observation research method for her investigation.

(2)

(b) Draw a frequency table that Kamira could have used to record the data for her observation.

You must include appropriate column and row headings.

(3)

DO NOT WRITE IN THIS AREA

(c) Describe **one** situational variable that Kamira may have considered when conducting her observation.

(2)

(Total for Question 2 = 7 marks)

3 Quentin is investigating the capacity of short-term memory. He showed 20 objects to 10 participants for 30 seconds. Quentin then asked them to recall as many as they could.

His results are shown in Table 2.

Participant	Number of objects recalled
А	10
В	9
С	8
D	8
E	6
F	7
G	8
Н	9
I	10
J	11

Table 2

(a) Calculate how many participants recalled nine objects as a fraction of all participants.

You must give your answer in the lowest form.

(1)

Fraction

	(b) Calculate the median for the number of objects recalled.
DO NOT WRITE IN THIS AREA	Media (c) Calculate the mode for the number of objects recalled.
DO NOT WRITE IN THIS AREA	Moc (d) State how Quentin would calculate the mean score for the number of objects recalled.

(c)	Identify the number of students who scored more than 70 in their maths test
	using the scatter diagram in Figure 2 .

Number scoring more than 70

(Total for Question 4 = 3 marks)

5	Godden and Baddeley (1975) conducted a field experiment to test memory. They used lists of words that were learned and then recalled in either the same or differen environments to learning.	t
	They used scuba divers as participants who learned and recalled the words either underwater or on dry land. These environments were familiar to the divers.	
	The scuba divers were allocated into the following different conditions:	
	Words learned underwater, recalled underwater.	
	Words learned underwater, recalled on dry land.	
	Words learned on dry land, recalled on dry land.	
	Words learned on dry land, recalled underwater.	
	The word lists were prerecorded and presented to the scuba divers twice when they were in their learning environment. The words were read at two-second intervals in the recording.	
	Godden and Baddeley (1975) found that more words were recalled when the divers were in the same environment in which they had learned the words, compared to when learning and recall took place in different environments.	
	Evaluate the use of field experiments to investigate human behaviour.

Ð	Li is struggling to manage his anger in situations where he finds himself in conflict with others. He has already been given several warnings from the police for shouting abusive comments at other people and for threatening behaviour.
	The police have assigned a support worker to meet with Li once a week to help him learn to behave in a less aggressive way.
	Explain how positive reinforcement could be used to help Li behave in a less aggressive way.
	(Total for Question 9 = 2 marks)
0	Bella lives in a small village. She is known to be a kind and considerate girl, and she volunteers with the fire service in her local community. Bella likes to watch action films, and some of these contain scenes of aggression, violence, and criminal behaviour. Bella has never been in trouble.
	Explain one reason for Bella's pro-social behaviour.
	You must use Charlton et al. (2000) to justify your answer.
	(Total for Question 10 = 2 marks)

11 Calvin caused a road traffic accident nine months ago by driving dangerously over the speed limit. The court banned him from driving for 12 months and removed his driving licence.

Calvin has now caused a second road traffic accident by driving while above the legal alcohol limit and without a licence. He has been sentenced to six months' imprisonment.

Explain **one** strength and **one** weakness of prison as a punishment for Calvin's behaviour.

*26 Liz was on a train looking out of the window. Although she did not feel like she was moving, she knew the train was travelling very fast. Liz could see a church and although the features of the church building were blurred and unclear, she knew it was far away. She could also see fields and trees stretching into the distance.

Liz became aware that the train was slowing down, even though she could not hear the sound of it slowing down. Liz stood up and began to gather her belongings, but when she looked through the window of the train, she saw that the station was smaller than the trees she could also see, so she sat back down.

Assess how well the Direct Theory of Perception (Gibson, 1966) can explain how Liz was able to interpret her surroundings.

CECTION E
xplain one benefit of sleep that may help Aditi to do well during her interview.
(Total for Question 30 = 2 marks)
hris was completing astronaut training in an underground bunker. During this time hris had no natural light and could only use a lamp to provide light.
hris tended to be awake for over 20 hours and slept for around 7 hours. At the end f the training, Chris believed he had been in the underground bunker for 12 days; owever, it had actually been 15 days.
xplain one reason why Chris may not have realised he had been in the underground unker for 15 days.
ou must use a study to justify your answer.

*33 Artez is a paramedic who works night shifts. He is worried about his sleep pattern because he can feel tired at work. Artez asks a colleague how they manage their sleep pattern when working nights. She tells Artez that it may be easier if he tries to carry on sleeping in the day and staying awake at night when he is not working.

The colleague also suggests the use of bright lighting when Artez wakes up, and extra thick curtains for sleeping in the daytime. She recommends that Artez should have a big breakfast as soon as he can when he wakes up, and make sure he has a light meal when he finishes work, and then leave a couple of hours before going to bed.

Assess how well the use of external influences could help Artez with his sleep.

37 Angela and Missy were having a conversation about their plans for their future.

Angela:	I want to be a lawyer so I will need to go to university.
Missy:	I am not sure what I want to be, but I definitely plan to go to university.
Angela:	We would have so much fun! Can you imagine if we lived together?
Missy:	That would be so cool! We could have a house with a 200-inch TV!
Angela:	Like a cinema house!!

Explain, using Aitchison (1983), **one** way that Angela and Missy's communication is different from how animals communicate.

(Total for Question 37 = 2 marks)

38 Peter is nine months old. He is thirsty but cannot yet say the word 'thirsty' or 'drink'. Peter points to his drink and makes a squealing noise. Once his mother passes him the drink, he stops making the squealing noise.

Explain how Peter is able to understand that he needs a drink without having the language to say he is thirsty.

You must use Vygotsky (1981) to justify your answer.

39 George and Edward were arguing about who was the best at sport. George instinctively narrowed his eyes at Edward and said he was the best sportsman. Edward creased his eyebrows, frowned at George, and then called him a liar. George unfolded his arms and bared his teeth. Edward froze, clenched his jaw, and glared at George. Both George and Edward tensed their muscles, and their breathing rate became faster. Explain two ways that Darwin's (1872) theory of evolution can account for the non-verbal communication during the argument. 1 2 (Total for Question 39 = 4 marks) 44

*40 Naadir lives in a remote tribal community where there is limited technology. A visitor from a large city came to the community and brought a laptop computer. When the visitor asked Naadir where she could go to connect her laptop to the internet, Naadir did not understand what the visitor meant.

The visitor showed Naadir the laptop, which Naadir called a television. When the visitor was typing on the keyboard of the laptop, she showed Naadir how the words would then appear on screen. Naadir responded by saying how the remote control for the television was very advanced. He later told his friends about the special television that came from the city.

Assess how well linguistic determinism can explain why Naadir talks about the laptop as a television.
