A-level PHYSICS

Paper 3 Section A

Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet
- a protractor.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 45.
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

Time allowed: The total time for both sections of this paper is 2 hours. You are advised to spend approximately 70 minutes on this section.

Section A

Answer **all** questions in this section.

0	1
---	---

Figure 1 shows apparatus used to measure the speed of sound in a steel rod.

Figure 1

The steel rod is suspended from a beam using rubber bands. When the hammer is in contact with the end **L** of the steel rod, a circuit is completed and the signal generator is connected to the oscilloscope.

Figure 2 shows the waveform then displayed on the oscilloscope.

Figure 2

0 1 . 1

Which control on the oscilloscope should be used to centre the trace vertically on the screen?

Tick (✓) **one** box.

[1 mark]

X-shift

Y-gain

Y-shift

Question 1 continues on the next page

Turn over ►

When the hammer hits end **L**, a sound wave travels along the steel rod and is reflected at end **R**.

When the wave returns to **L** the rod bounces away from the hammer and the circuit is broken.

Figure 3 shows the waveform produced by the brief contact between the hammer and end **L**.

Note that the waveform has now been centred vertically.

Figure 3

Figure 4 shows the time-base setting of the oscilloscope.

Figure 4

0 2

Figure 5 shows a strip of steel of rectangular cross-section clamped at one end. The strip extends horizontally over the edge of a bench.

Figure 5

end view of unloaded steel strip

0 2 . 1

A mass m is suspended from the free end of the strip.

This produces a vertical displacement y .

A student intends to measure y with the aid of a horizontal pin fixed to the free end of the steel strip.

She positions a clamped vertical ruler behind the pin, as shown in **Figure 6**.

Figure 6

plan view

Explain a procedure to avoid parallax error when judging the reading indicated by the position of the pin on the ruler.

You may add detail to **Figure 6** to illustrate your answer.

[2 marks]

Question 2 continues on the next page

Turn over ►

0 3

Conductive putty can easily be formed into different shapes to investigate the effect of shape on electrical resistance.

0 3 . 1

A student uses vernier callipers to measure the diameter d of a uniform cylinder made of the putty.

Suggest **one** problem with using callipers to make this measurement.

[1 mark]

0 3 . 2

Table 1 shows the calliper measurements made by a student.

Table 1

d_1 / mm	d_2 / mm	d_3 / mm	d_4 / mm	d_5 / mm
34.5	34.2	32.9	33.4	34.0

Show that the percentage uncertainty in d is about 2.4%.
Assume that all the data are valid.

[2 marks]

0 3 . 3 The length of the cylinder is 71 ± 2 mm.

Determine the uncertainty, in mm^3 , in the volume of the cylinder.

[4 marks]

uncertainty = _____ mm^3

Question 3 continues on the next page

Turn over ►

0 3 . 4

A student is given some putty to form into cylinders.

To find the resistance of a cylinder, metal discs are placed in contact with the ends of the cylinder and connected to a resistance meter.

Figure 7 shows the apparatus.

Figure 7

The student forms the putty into cylinders of different lengths, each of volume $5.83 \times 10^{-5} \text{ m}^3$.

The length L and resistance R are measured for each cylinder.

It can be shown that $R = \frac{\rho L^2}{5.83 \times 10^{-5}}$ where ρ is the resistivity of the conductive putty.

The student plots the graph shown in **Figure 8**.

Determine ρ .

State an appropriate SI unit for your answer.

[4 marks]

$\rho =$ _____ $\text{unit} =$ _____

Figure 8

11

Turn over ►

0 4

Figure 9 shows air trapped in a vertical cylinder by a valve and a piston **P**. The valve remains closed throughout the experiment.

A mass is placed on top of **P**.

P moves downwards and the volume of the trapped air decreases.

There are no air leaks and there is no friction between the cylinder and **P**.

Figure 9

The vertical distance y between the end of **P** and the closed end of the cylinder is measured.

Additional masses are used to find out how y depends on the total mass M placed on top of **P**.

Figure 10 shows a graph of these data.

0 4 . 1

Show that y is **not** inversely proportional to M .
Use data points from **Figure 10**.

[2 marks]

Figure 10

Question 4 continues on the next page

Turn over ►

0 4 . 2

The masses are removed and the cylinder is inverted.
P moves downwards without friction before coming to rest, as shown in **Figure 11**.

Figure 11

Explain why **P** does not fall out of the cylinder unless the valve is opened.

[3 marks]

0 4 . 3 The mass of **P** is 0.350 kg.

Deduce y when the cylinder is in the inverted position shown in **Figure 11**.

Draw a line of best fit on **Figure 10** to arrive at your answer.

[4 marks]

$y =$ _____ mm

Question 4 continues on the next page

Turn over ►

Figure 12 shows apparatus used in schools to investigate Boyle's law.

Figure 12

A fixed mass of air is trapped above some coloured oil inside a glass tube, closed at the top.

A pump applies pressure to the oil and the air.

The trapped air is compressed and its pressure p is read from the pressure gauge.

0 4 . 4

A scale, marked in 0.2 cm^3 intervals, is used to measure the volume V of the air. A student says that the reading for V shown in **Figure 12** is 35.4 cm^3 .

State:

- the error the student has made
- the correct reading, in cm^3 , of the volume.

[2 marks]

volume = _____ cm^3

Question 4 continues on the next page

Turn over ►

0 4 . 5 Figure 13 shows data obtained using the apparatus in Figure 12.

Figure 13

Explain why the gradient of the graph in **Figure 13** confirms that the air obeys Boyle's law.

[3 marks]

0 4 . 6

The largest pressure that can be read from the pressure gauge is 3.4×10^5 Pa.

Determine, using **Figure 13**, the volume V corresponding to this pressure.

[3 marks] $V =$ _____ cm^3

0 4 . 7

State **one** property of the air that must not change during the experiment.
Go on to suggest how this can be achieved.

[2 marks]
